

COMP348 — Document Processing and the Semantic Web

Week 01 Lecture 1: Introduction and Overview

Diego Mollá

COMP348 2019H1

Abstract

In this lecture we will do a brief overview of what the unit is about, and we will cover practical issues regarding the unit.

Update February 18, 2019

Contents

1	Document Processing and the Semantic Web	2
2	Example Applications	3
3	Unit Practicalities	5

Reading

- Lecture Notes
- Unit guide

Welcome to COMP348!

...in which you will learn

- how to build software applications
- that use
 1. data mining
 2. knowledge about language
- to do useful things with documents
- with particular emphasis on Web solutions and documents.

1 Document Processing and the Semantic Web

Document Processing

Information Overload

- A lot of information is available as free text.
- The most natural form to write information is through free text.
- A great deal of digital information is available as free text.
- People can read and understand free text easily.
- But it's very hard for machines!

Document Processing and the Web

The Web

- The Web was initially conceived as a means to hyperlink documents.
- Most of the information available on the Web is (still) as free text.
- This is what is often called unstructured data.

Why Document Processing for the Web?

1. Web search: We want to find information.
2. Spam filtering: We want to ignore (some) information.
3. Sentiment analysis: We want to classify information.
4. Text mining: We want to discover information.

The Semantic Web

Adding Semantics to the Web

- Web 1.0: The good, old-fashioned Web.
- Web 2.0: The social web.
- Web 3.0: The semantic web.

What we say to dogs

Okay, Gopher! I've had it! You stay out of the garbage! You understand Gopher? Stay out of the garbage, or else!

What they hear

Bleh, bleh GOMBER! Bleh, bleh, bleh, bleh GOMBER! Bleh, bleh, bleh GOMBER! Bleh, bleh, bleh GOMBER! Bleh, bleh, bleh GOMBER!

Conversational Interfaces

https://www.androidcentral.com/google-now

Results to queries asked in current search engines may be enriched with information mined from:

- Google Search (13 Feb 2018)

Google search results for "language technology" (Feb 13, 2018).

Search results include:

- Language technology - Wikipedia**: Language technology, often called human language technology (HLT), consists of natural language processing (NLP) and computational linguistics (CL) on the one hand, and speech technology on the other. It also includes many application oriented aspects of these.
- Macquarie University - Centre for Language Technology (CLT)**: Located in Sydney, Australia, Macquarie University's Centre for Language Technology is Australia's largest and longest-established body of researchers working in natural language processing, computational linguistics and language technology. We have a well-developed infrastructure...
- Macquarie University - What is language technology?**: Language Technology (LT) is the late 1990s outgrowth of 40 years of research into natural language processing (NLP), a subfield of artificial intelligence.
- What is Language Technology? - Macquarie University**: Language Technology builds on 40 years of research in natural language processing and artificial intelligence to support applications like the following: Spoken Language Dialog Systems. These systems enable you to talk to a computer via a telephone in order to enact some transaction or information-seeking task.
- Language Technologies Institute - Carnegie Mellon University**: The Language Technologies Institute at Carnegie Mellon educates the leaders of tomorrow and performs groundbreaking research in the areas of Natural Language Processing, Computational Linguistics, Information Extraction, Summarization & Question Answering, Information Retrieval, Text Mining & Analytics...
- DFKI LT - What is Language Technology?**: Language technology — sometimes also referred to as human language technology — comprises

On the right, a map shows the location of the Centre for Language Technology at Macquarie Park, New South Wales. The address is Eastern Rd, Macquarie University NSW 2109. The phone number is (02) 9850 7111. There is a 1 Google review.

Google Search (13 Feb 2018)

Google search results for "what's the best treatment for headaches?" (Feb 13, 2018).

Search results include:

- Headache Roll On Relief | Naturally Soothe Headaches | amrita.net**: Provides an Alternative to Conventional Treatment. Best Products and Prices.
 - Facial Serums
 - Essential Oils
 - Shop Books
 - Natural Perfumes
- Need Headache Information? | Call a HealthNow Doctor Today**: Discuss Your Symptoms & Get Advice from an Expert from Just \$69. Call Now. Accredited & Registered - Australian Based GPs - Qualified After Hours GPs - Fully Accredited Doctors. Highlights: Provides Knowledgeable Medical Advice, Qualified Australian Doctors.
 - How It Works
 - Meet The Team
 - What We Treat
 - Things To Know
- Treatment may include:**
 - Rest in a quiet, dark room.
 - Hot or cold compresses to your head or neck.
 - Massage and small amounts of caffeine.
 - Over-the-counter medications such as ibuprofen (Advil, Motrin IB, others), acetaminophen (Tylenol, others), and aspirin.
- Headaches: Treatment depends on your diagnosis and symptoms ...**: https://www.mayoclinic.org/diseases-conditions/.../headaches/in.../headaches/art-2004737...
- Best Headache Remedies: 13 Ways to Kill the Pain - Health**: Oct 20, 2015 - There are the obvious choices for zapping the pain, such as nonsteroidal anti-inflammatory drugs (Motrin and Aleve, for example). People with migraines often take beta blockers or antidepressants to prevent headaches, and triptans, such as Imitrex or Relpax, once symptoms start.
- 10 Natural Home Remedies for Headaches That Actually Work - NDTV ...**: Sep 10, 2017 - So when a headache looms, you know what to do. 10-best-home-remedies-headache-5 6. Heat Up or Cool Down? Applying an ice pack to the back of your neck can give relief

Sentiment Analysis

Very often used for analysis of opinions in social media.

The Semantic Web

Berners Lee et al. (2001)

The Semantic Web is an extension of the current web in which information is given well-defined meaning, better enabling computers and people to work in cooperation.

- The Semantic Web annotates the contents of Web documents with meaning.
- The Semantic Web provides mechanisms to specify meaning and reason with meaning.
- Still largely unrealised, but it has developed various technologies that are becoming increasingly useful.

3 Unit Practicalities

What This Unit is About

- COMP348 explores the issues involved in building significant text processing applications.
 - Emphasis on *non-interactive* natural-language text processing systems.

- Emphasis also on text processing relative to the Web.
- Programming language: Python.
- This unit has COMP249 or COMP257 as a prerequisite.

Staff and Consultation Times

Rolf Schwitter Unit Convenor, Lecturer
4 Research Park Drive, 359, rolf.schwitter@mq.edu.au

Diego Molla Lecturer
4 Research Park Drive, 358, diego.molla-aliod@mq.edu.au

Bayzid Ashik Hossian Workshops
bayzid-ashik.hossain@mq.edu.au

Abdus Salam Workshops
abdus.salam@hdr.mq.edu.au

Web Resources

- The unit is available in iLearn <http://ilearn.mq.edu.au>.
- All the administrative material presented in this lecture is also available at this site.
 - Unit Outline.
 - Administrative Information.
 - Lecture Notes
 - Pointers to Reading.
 - Other Useful Stuff.
- You are expected to keep up-to-date by using iLearn for:
 - Relevant news and information.
 - Discussions.
 - Submission of assignments.

Github

- Some of the material of this unit is available in a public github repository.
- <https://github.com/dmollaaliod/comp348-2019>
 - Lecture notes
 - Workshop tasks
 - Code
- If you know how to use git, this will be the best way to make sure you have the latest versions.
 - git is one of the most popular version control systems.
 - Search the Web for tutorials and additional information on git.
- You can use the github browser interface to download individual files.

Learning Outcomes

1. Explain the main techniques that are used to develop and implement intelligent document processing applications.
2. Describe the functionality of the key components in document processing architectures.
3. Implement text processing applications using a programming language.
4. Apply web technology to document processing.

Rooms and Times

Lectures

- Monday 9am-11am (3 Innovation Rd - G240 Faculty Tute Rm)
- Friday 10am-11am (3 Innovation Rd - G240 Faculty Tute Rm)

Workshops

One of these; check your timetable!

- Tuesday 11am-1pm (9 Wallys Wlk - 127 Faculty PC Lab)
- Tuesday 1pm-3pm (9 Wallys Wlk - 127 Faculty PC Lab)
- Tuesday 3pm-5pm (9 Wallys Wlk - 127 Faculty PC Lab)

Please Note

Workshops start from this week.

Textbooks

- Weeks 1 to 6 will use (mostly):
 - “NLTK Book”: Steven Bird, Ewan Klein, Edward Loper. Natural Language Processing with Python — Analyzing Text with the Natural Language Toolkit. <http://www.nltk.org/book>
 - “Deep Learning Book”: François Chollet. Deep Learning with Python. (available in the library).
- Weeks 7 to 12 are *not* based on any textbooks; we’ll put a list of online texts.
- Every week there will be assigned readings; these readings are essential.
- The web site also has pointers to online resources.
 - Recommendations for additions are welcome.

Workshops

Workshops

- Tutorial/prac sessions begin from week 1.
- Tasks will typically cover practical assignment tasks and extensions/variations of exam questions.
- The practical exercises will focus on lab work on practical problems.
- This is also your opportunity to discuss and clarify content issues.

Practical Assessed Assignments

1. Simple Document Processing (5%, due Week 3)
 - Use of pre-packaged tools.
 - Can be used as a diagnostic test (before census date).
2. Document Processing (20%, due Week 7)
 - Use of techniques used in commercial and research applications.
 - Use of real (messy) text data.
3. Semantic Web (15%, due Week 12)
 - Integration of Semantic Web technologies.

Submitting your Assignment

- *Read the assignment specifications.*
- Submit in iLearn.
- Hard deadlines:
 - 20% of the **maximum** mark off per day of delay.

Plagiarism

- You may discuss but not write together.
- Read the Academic Honesty Policy. <https://staff.mq.edu.au/work/strategy-planning-and-governance/university-policies-and-procedures/policies/academic-honesty>

Assessment

Assessment Components

- Assignment 1: 5%
- Assignment 2: 20%
- Assignment 3: 15%
- Exam: 60%

Final Assessment

- Your final mark and grade are entirely determined by the sum of marks of the individual assessment tasks.
- To pass the unit, the sum of marks must be at least 50% of the total assessment marks.
- This unit does not have hurdle assessments.

Tentative Lecture Schedule — Diego

1. NLP Systems + Text Processing with Python (NLTK Ch 1)
2. Information Retrieval (Manning et al.)
3. Text Classification (NLTK Ch 6)
4. Deep Learning for Text Classification (Chollet, Ch. 2 & 3)
5. Text Sequences (Chollet, Ch. 6)
6. Generation of Text (Chollet, Ch. 8.1)

Lecture Schedule — Rolf

7. The Semantic Web; XML and XSLT (XSLT tutorial at W3School)
8. RDF, RDF Schema, SPARQL (RDF Primer, SPARQL at W3C)
9. Linked Data (DBpedia)
10. Ontologies (Kroetzsch et al 2012, OWL Primer)
11. Rule Languages (RIF Primer)
12. Semantic Web Applications and Recent Trends
13. Revision

Important Things To Do

- Print out the lecture notes *before* going to the lecture.
- Read the workshop specification *before* going to the session.
 - time in the sessions is gold.
- Read the online Unit Outline; this is your “contract”.
- Schedule an average of 9 hours per week for working on this unit:
 - As in every 3-credit-point unit.
 - This includes the mid-semester break.

What’s Next

Tuesday

- Python for Text Processing
- Workshop: Python and Text Processing

Reading

- NLTK Chapter 1
- <http://docs.python.org/tut/tut.html>
